# **Python For Data Science** Cheat Sheet Bokeh

## **Plotting With Bokeh**

The Python interactive visualization library Bokeh enables high-performance visual presentation of large datasets in modern web browsers.

Bokeh's mid-level general purpose bokeh.plotting interface is centered around two main components: data and glyphs.

The basic steps to creating plots with the bokeh.plotting interface are:

1. Prepare some data:

Python lists, NumPy arrays, Pandas DataFrames and other sequences of values

- 2. Create a new plot
- 3. Add renderers for your data, with visual customizations
- 4. Specify where to generate the output
- 5. Show or save the results

```
>>> from bokeh.plotting import figure
>>> from bokeh.io import output file, show
>>> x = [1, 2, 3, 4, 5]
>>> y = [6, 7, 2, 4, 5]
>>> p = figure(title="simple line example",
              x axis label='x',
              y axis label='y')
>>> p.line(x, y, legend="Temp.", line width=2) < Step 3
>>> output file("lines.html") < Step 4
>>> show(p) < Step 5
```

### Data

### Also see Lists, NumPy & Pandas

Under the hood, your data is converted to Column Data Sources. You can also do this manually:

```
>>> import numpy as np
>>> import pandas as pd
>>> df = pd.DataFrame(np.array([[33.9,4,65, 'US'],
                                     [32.4,4,66, 'Asia'],
                                     [21.4,4,109, 'Europe']]),
                        columns=['mpg','cyl', 'hp', 'origin'],
index=['Toyota', 'Fiat', 'Volvo'])
>>> from bokeh.models import ColumnDataSource
>>> cds df = ColumnDataSource(df)
```

# Plottina

```
>>> from bokeh.plotting import figure
>>> p1 = figure(plot width=300, tools='pan,box zoom')
>>> p2 = figure(plot width=300, plot height=300,
               x range=(0, 8), y range=(0, 8))
>>> p3 = figure()
```

# **Renderers & Visual Customizations**

# Glyphs

# Scatter Markers

### >>> p1.circle(np.array([1,2,3]), np.array([3,2,1]), fill color='white') >>> p2.square(np.array([1.5,3.5,5.5]), [1,4,3], color='blue', size=1) **Line Glyphs**

```
>>> p1.line([1,2,3,4], [3,4,5,6], line_width=2)
>>> p2.multi line(pd.DataFrame([[1,2,3],[5,6,7]]),
                 pd.DataFrame([[3,4,5],[3,2,1]]),
                 color="blue")
```

### Rows & Columns Layout

>>>layout = row(column(p1,p2), p3)

```
Columns
>>> from bokeh.layouts import row|>>> from bokeh.layouts import columns
>>> layout = row(p1,p2,p3)
                                  >>> layout = column(p1,p2,p3)
Nesting Rows & Columns
```

### **Linked Plots**

### Also see Data

| >>> p3.circle('mpg', 'cyl', source=cds df,

Selection and Non-Selection Glyphs

>>> p.circle('mpg', 'cyl', source=cds df,

>>> color mapper = CategoricalColorMapper(

selection color='red',

nonselection alpha=0.1)

>>> hover = HoverTool(tooltips=None, mode='vline')

color=dict(field='origin',

factors=['US', 'Asia', 'Europe'],

palette=['blue', 'red', 'green'])

transform=color mapper),

legend='Origin'))

>>> p = figure(tools='box select')

Also see Data

### Grid Lavout >>> from bokeh.layouts import gridplot >>> row1 = [p1,p2] >>> row2 = [p3]>>> layout = gridplot([[p1,p2],[p3]])

### Tabbed Lavout

```
>>> from bokeh.models.widgets import Panel, Tabs
>>> tab1 = Panel(child=p1, title="tab1")
>>> tab2 = Panel(child=p2, title="tab2")
>>> layout = Tabs(tabs=[tab1, tab2])
```

```
Linked Axes
>>> p2.x range = p1.x range
>>> p2.y range = p1.y range
 Linked Brushing
```

```
>>> p4 = figure(plot width = 100, tools='box select, lasso select')
>>> p4.circle('mpg', 'cyl', source=cds df)
>>> p5 = figure(plot width = 200, tools='box select, lasso select')
>>> p5.circle('mpg', 'hp', source=cds df)
>>> layout = row(p4,p5)
```

**Customized Glyphs** 

Hover Glyphs

Colormapping

>>> p3.add tools(hover)

### Leaends

### Legend Location

```
Inside Plot Area
>>> p.legend.location = 'bottom left'
```

```
Outside Plot Area
>>> r1 = p2.asterisk(np.array([1,2,3]), np.array([3,2,1])
>>> r2 = p2.line([1,2,3,4], [3,4,5,6])
>>> legend = Legend(items=[("One", [p1, r1]),("Two", [r2])], location=(0, -30))
```

```
>>> p.add layout(legend, 'right')
```

# **Legend Orientation**

```
>>> p.legend.orientation = "horizontal"
>>> p.legend.orientation = "vertical"
```

### Legend Background & Border

```
>>> p.legend.border line color = "navy"
>>> p.legend.background fill color = "white"
```

# Output

### **Output to HTML File**

```
>>> from bokeh.io import output file, show
>>> output file('my bar chart.html', mode='cdn')
```

### **Notebook Output**

```
>>> from bokeh.io import output notebook, show
>>> output notebook()
```

### Embedding

### Standalone HTML

```
>>> from bokeh.embed import file html
>>> html = file html(p, CDN, "my plot")
>>> from bokeh.embed import components
>>> script, div = components(p)
```

# Show or Save Your Plots

```
>>> show(p1)
                               >>> save(p1)
>>> show(layout)
                               >>> save(layout)
```

## Statistical Charts With Bokeh

### Bokeh's high-level bokeh. charts interface is ideal for quickly creating statistical charts

#### Bar Chart

>>> p = Bar(df, stacked=True, palette=['red', 'blue'])

### Box Plot

### Histogram

### Scatter Plot
